

# The Map of the Resurrection of the Dead

Prepared

Cryonics

Plastination

Digital immortality

Reconstruction by AI

Kardashev 3 AI

- **Reconstruction based on traces** - DNA, records, bones, traces, memory of other people with the help of strong AI.
- **Super-archeology** - analyze the entire surface of Earth at the atomic level in search of traces, pieces of DNA and so on.
- **Resurrection simulation** is a computer simulation of human life, if only its DNA and a number of initial and historical conditions are known

Kardashev 4 AI

Reconstruction of a person with the help of a strong AI with **acausal trade with parallel worlds in MWI and the use of randomness to fill in unknown information** (that is, the missing information is filled with a random number generator, with the expectation that in one of the branches of the multiverse it exactly matches the desired one. Unnecessary branches coincide with other worlds.)

Kardashev 5 AI

**Total reconstruction** of all possible people using computer simulations. That is, we create a huge number of simulations of the entire history of the Earth. This can only happen beyond the AI of a galactic scale,

Hypothetical

New physics

New physics: reading information from the past, wormholes, time machines  
Observation of the earth from far from space, if you manage to get there faster than the speed of light and build there huge telescopes

Eternal return

Everything will happen again, if you wait eternity according to Nietzsche.

Parallel world in MWI

Teleportation to a parallel world in MWI, where the death of a person has not occurred, or the establishment of a connection with him

Simulation

- We are in the simulation, and everything is written in the main computer - we need to read it;
- And maybe it simulates afterlife;
- Maybe we were recorded by aliens

Fantastical

Universal executor of desires based on quantum immortality

That is self-destruction in all branches of the multiverse, except for those where the desire is fulfilled, and the dead is in fact never died

New traces

Finding new physical effects that recorded information about a person's thoughts or the state of his brain (prints of vibrations, traces of chemicals in bones, quantum radar, quantum entanglement, traces of cosmic ray trails that passed through the brain - like X-rays)

Partial

Reconstruction based on expectations of relatives

DNA clone

Transformative

Transformation

- Transformation into qualia, mood, image, symbol
- Biography, biopic movie
- Transformation during game: Kospely, dialogue of voices, theatre
- Life inside the memory of another - in dreams, in fantasies
- The ideal self is an improved person. The core of his personality

Partial with social transformation

- Legacy, foundation, collected works, museum, chat-bot, research institute, collected works, books, archive
- Children,
- Family, memories
- Homeland, monuments, epos.
- Personal things
- Preservation of the cell line and body parts, mummy
- The embodiment of values and ideas
- Symbolic reincarnation: name

Transcendental

Transcendental

- Confluence with God
- Reincarnation
- Afterlife
- Otherness
- Transformation into transcendental
